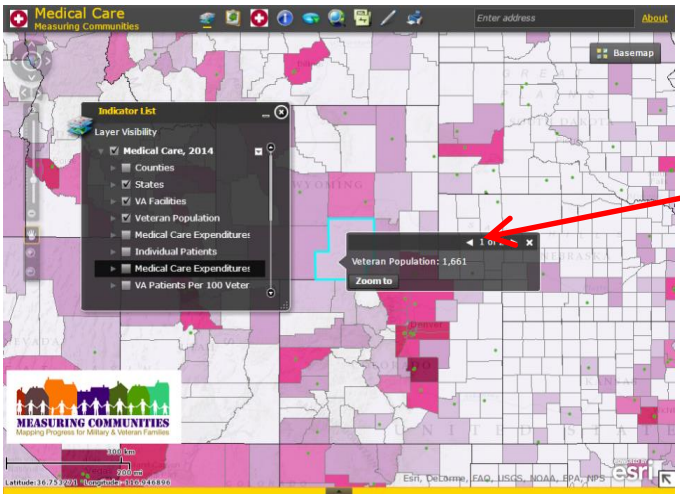
To View Medical Information in Map Form

Select "**By Map**":

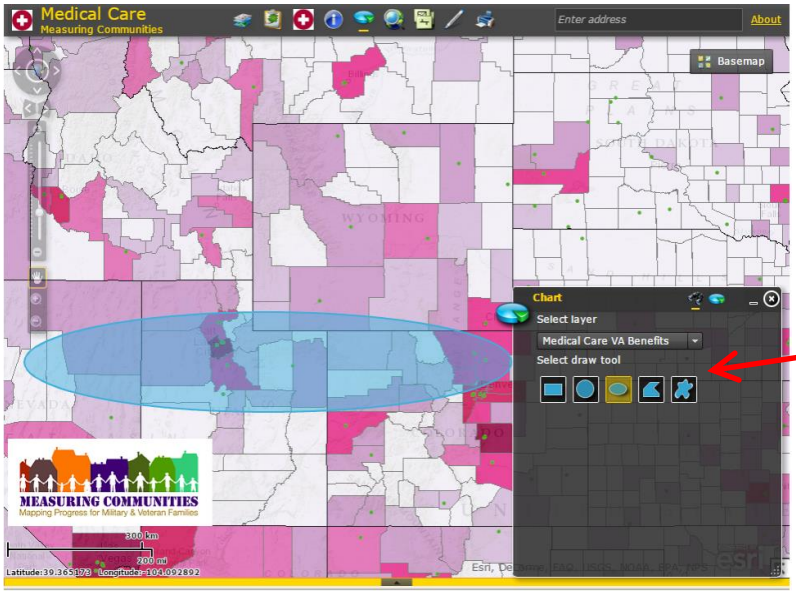
Click arrow to expand list of indicators to choose from:

Click on the box next to the indicator(s) you wish to view in the map.

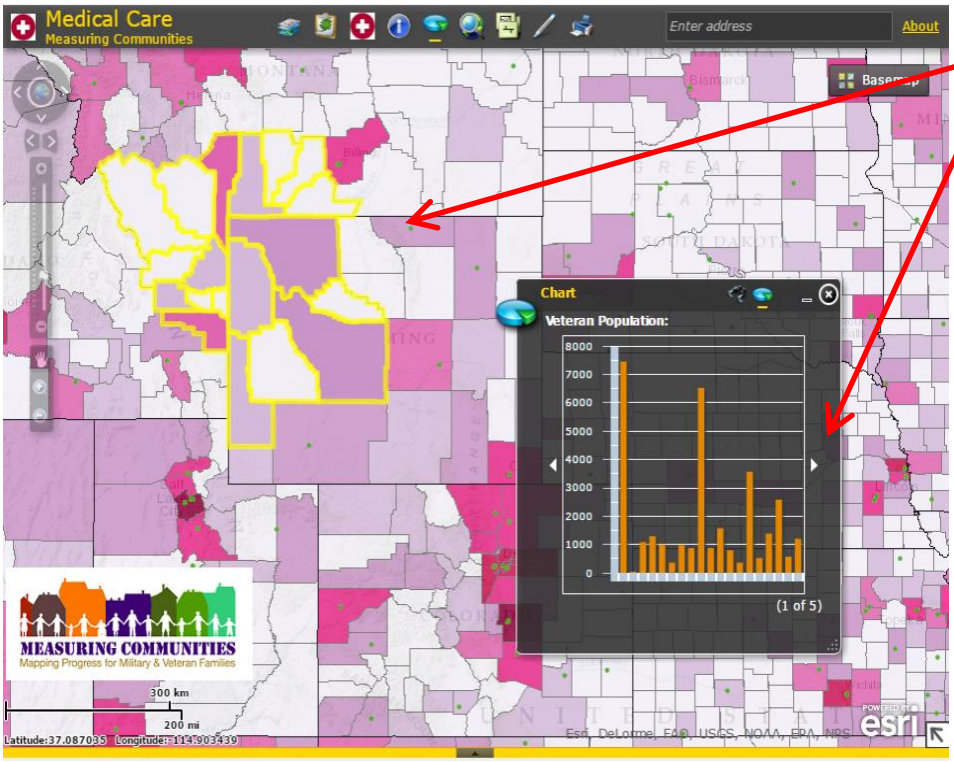


Once you've selected the indicators you wish to view, use the zoom bar on the far left to zoom in on a state or section of the county. Click on a county and the information on each indicator will appear in a data box. The number of boxes to view will be the same number of indicators you have selected: data for each indicator will be in a separate box. With location specific indicators, click on each separate dot (Dot Density display) to view the address of the location.

Use the chart tool to capture and display data on a specific area.



The draw tool within the chart feature allows you to utilize various shapes in order to “capture” your area of interest.



Once captured, the data on that specific area will be displayed in a chart. Hover over the bars in the chart to display specific data on the counties.
